SUBJECT: Sweet Home TSP and NSHA Refinement

Project #20020-015

TM#3 Existing Conditions

INTRODUCTION

This memorandum summarizes the transportation inventory of existing conditions for the City of Sweet Home and analyzes the existing multimodal travel conditions. A review of the existing transportation conditions for walking, biking, transit, motor vehicles, freight, and safety is included in the inventory.

The purpose of this existing conditions inventory and analysis is to assess the current conditions of the transportation system in Sweet Home, including its physical infrastructure, operational characteristics, and usage patterns. This includes an inventory of the existing transportation network, including roadways, sidewalks, bike infrastructure, and transit facilities. The analysis also includes an assessment of existing traffic conditions and a review of historical crash rates. The inventory will help identify potential gaps and deficiencies in the transportation system.

BACKGROUND

Sweet Home is a small city located in Linn County, Oregon, United States. As of the 2020 census, the population was approximately 10,000 people. The community is situated in the foothills of the Cascade Mountains and is known for its outdoor recreation opportunities, including hiking, fishing, and camping. Sweet Home is located approximately 19 miles east of Interstate 5 (I-5). Sweet Home is approximately 80 miles south of Portland, 40 miles north of Eugene/Springfield, and 45 miles west of Santiam Pass. The area surrounding Sweet Home is primarily rural and has historically been served by a mostly agricultural and timber-based economy. Located within the

South Santiam Watershed, the city is situated along the South Fork of the Santiam River at an elevation of about 537 feet.

US 20 (Santiam Highway) runs east-west through the city along Main Street and forms the major transportation link through the community. OR 228 (Holley Road) enters Sweet Home from the west and curves north to terminate at US 20 near the west end of the city.

Sweet Home is served by the Sweet Home School District. The district includes Sweet Home High School, a junior high school, and four elementary schools. The district covers Sweet Home, Cascadia, Crawfordsville, Holley, Liberty, Pleasant Valley, and other surrounding communities.

The study area boundary for this plan generally coincides with the Urban Growth Boundary (UGB), which is shown in **Figure 1** together with the city limits and street system, and key destinations identified within the city.

Figure 2 illustrates a zoning map of Sweet Home that shows how different land uses are oriented around the City. Most commercially zoned land is found in the downtown area, and highway commercial zoning is along US 20. High density residential land uses are primarily located along Long Street or adjacent to the downtown area, and medium and low density residential land uses radiate outward from the downtown area. In Fall 2022, the City updated the Development Code and added a Mixed Use Employment Zone (MUE) designation. This update was accompanied by an update to the Comprehensive Plan map, and all the properties currently zoned Recreation Commercial (RC) had the Comprehensive Plan designation changed to MUE. While existing zoning in the area was not changed during this process, the modification enables flexibility by providing the benefits of the existing RC zoning while facilitating future transition to the MUE. **Figure 3** illustrates the City's 2022 Zoning Update.

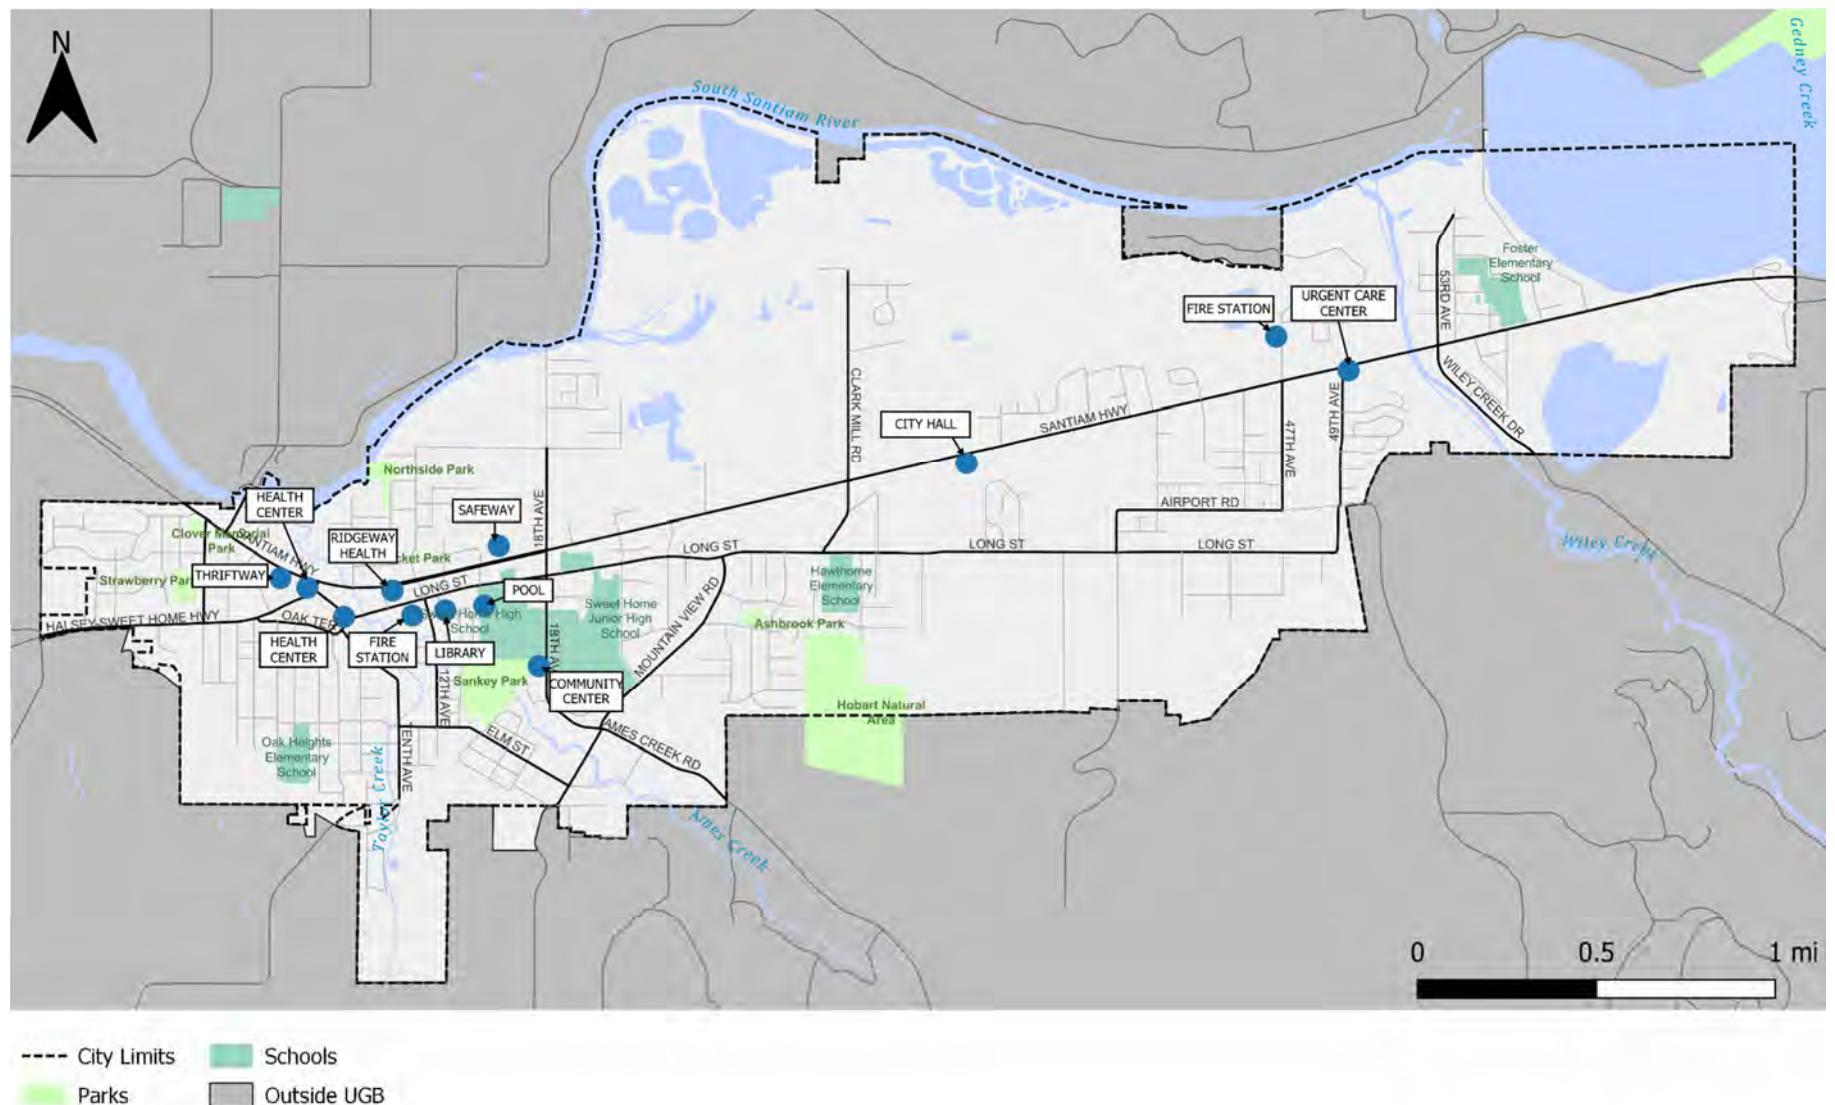

FIGURE 1: SWEET HOME AND KEY DESTINATIONS

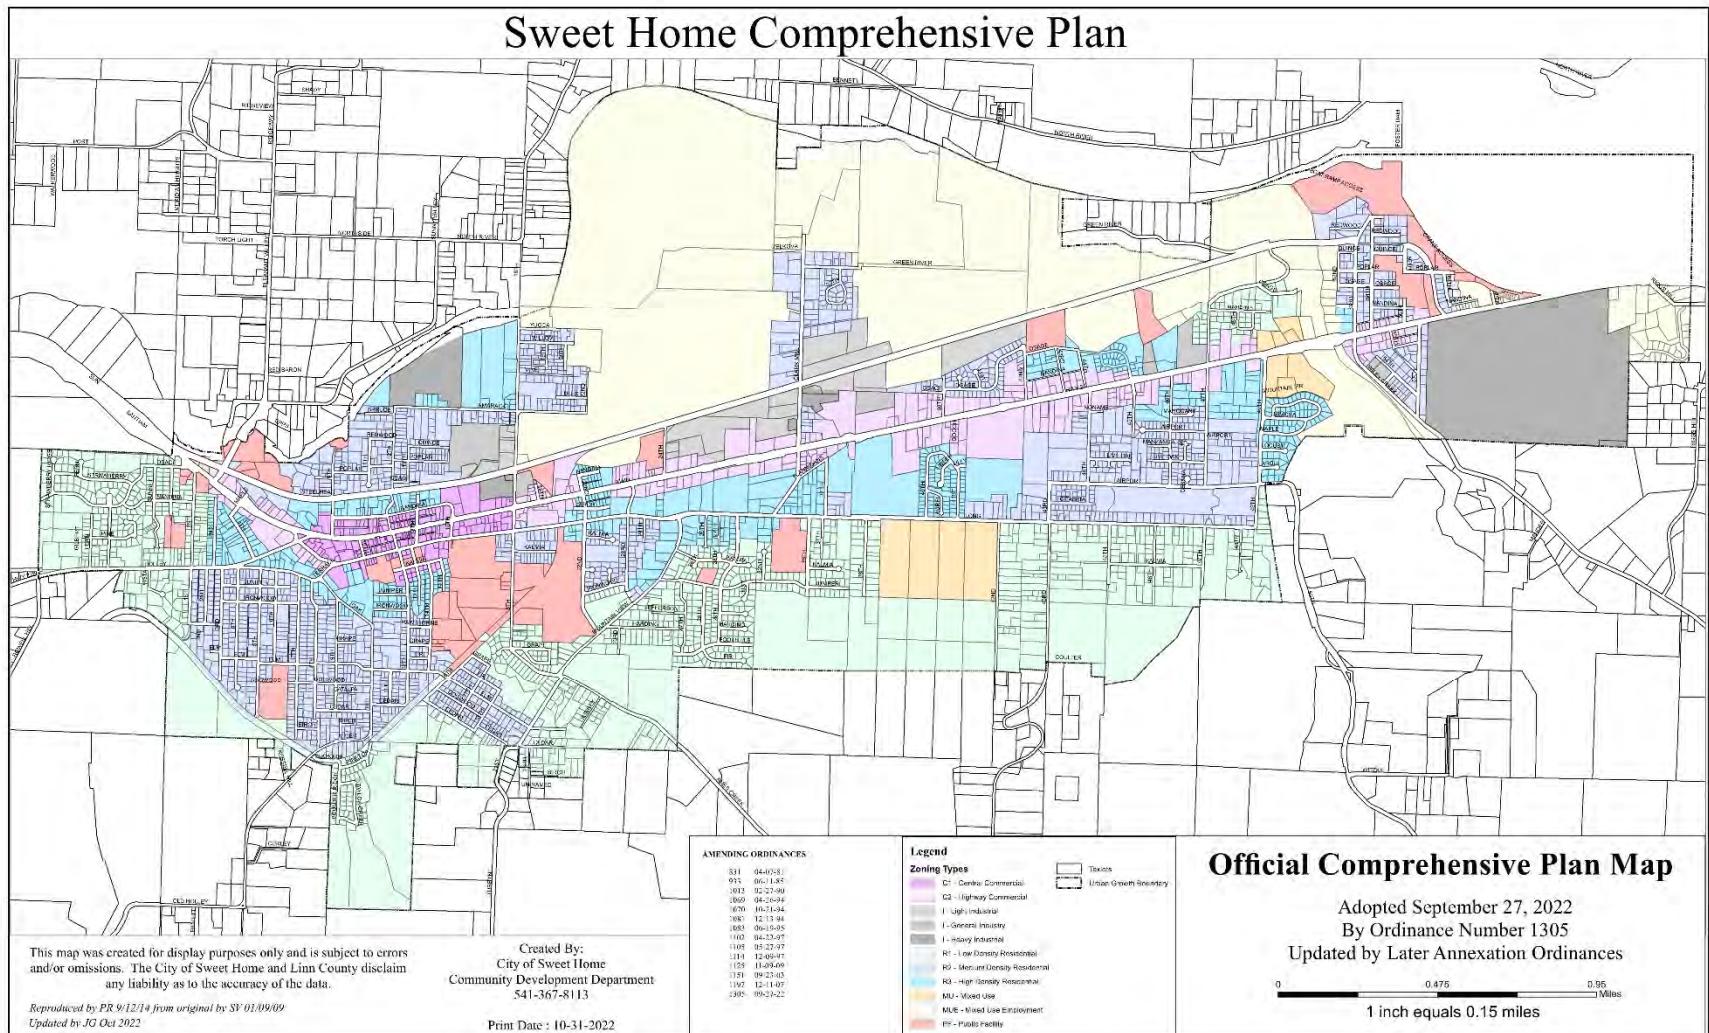

FIGURE 2: SWEET HOME COMPREHENSIVE PLAN (2022) LAND USE DESIGNATIONS

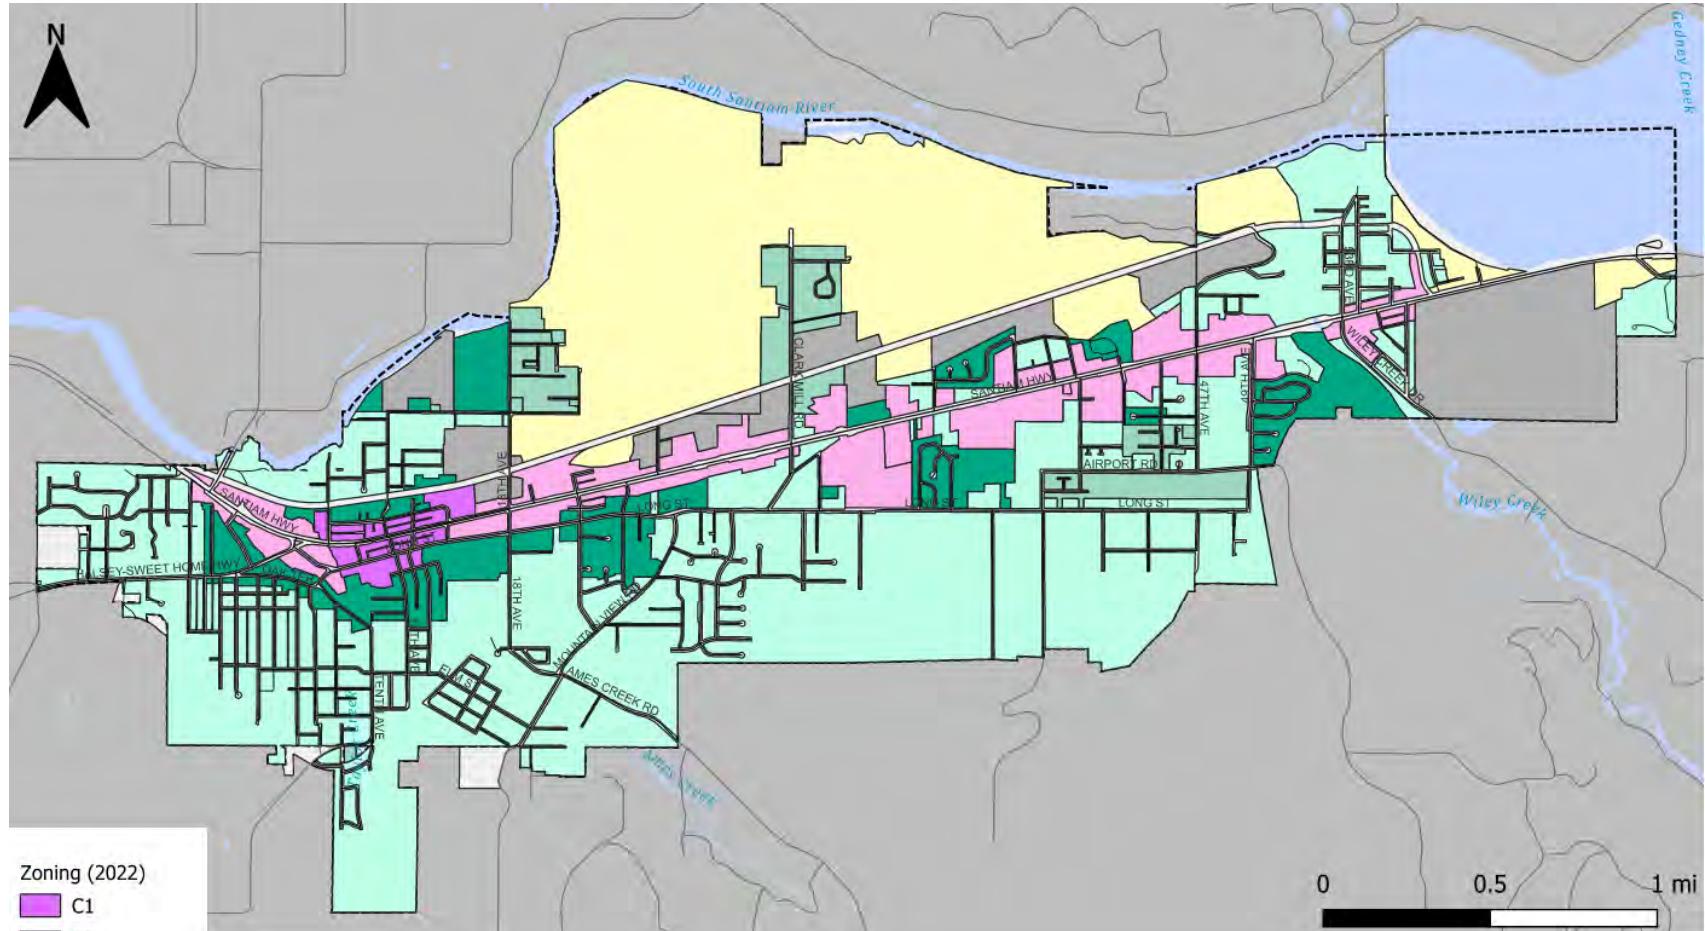

FIGURE 3: SWEET HOME ZONING UPDATE (2022)

WALKING AND BIKING CONDITIONS

Sweet Home is a compact city with many destinations located within a half-mile to three miles of each other. The system connectivity, density, and generally flat topography offer excellent pedestrian and cycling conditions in many areas of the city. The Sweet Home downtown area features a grid pattern of short blocks only interrupted by Ames Creek. Older areas in town also have a grid pattern, while newer areas transition to a more suburban character with long blocks and cul-de-sacs.

The primary corridor through Sweet Home is US 20 (Main Street/South Santiam Highway), which facilitates traffic flow between I-5 and Central Oregon. The high travel speeds of motor vehicles passing through the town to reach other destinations highlight the need for safe and highly visible pedestrian and bicycling facilities. Although improvements have been made, US 20 still lacks adequate infrastructure for pedestrians and bicyclists along much of its length. The downtown stretch of the highway features a median with mid-block crosswalks, promoting enhanced visibility and safety for motorists, cyclists, and pedestrians.

While some streets downtown provide satisfactory pedestrian amenities and can accommodate bicycles, many other streets in Sweet Home lack basic amenities such as sidewalks. Several barriers contribute to inefficient and less desirable pedestrian and bicycle travel, including the following:

- absence of walkways and challenges in crossing US 20 outside of the downtown area, the lack of sidewalks and bike lanes or paths on collector streets,
- limited east-west connectivity (aside from Long Street and US 20),
- and the absence of a connection between the newer and older parts of town via the street system, making it difficult to link the downtown core with the newer residential areas.

PEDESTRIAN NETWORK

Pedestrian facilities are a key aspect of a complete multimodal transportation system. Emphasizing pedestrian infrastructure not only promotes healthy lifestyles but also addresses social equity concerns by ensuring that individuals of all ages, including the young and elderly, as well as those without access to motorized transportation, can access essential goods, services, employment opportunities, public transit, and education.

Sidewalks are prevalent throughout the downtown core and many nearby residential neighborhoods. In addition, all commercial areas along Main Street are served by well-connected sidewalks, with most streets featuring curbs and sidewalk improvements. However, as one moves farther from the downtown and adjacent residential areas, the roadway character becomes more rural and less developed. The eastern part of the City, in particular, has noticeably fewer sidewalks compared to the western and central areas.

Sidewalks are present on one or both sides of the street on arterials and collectors, but there are deficiencies and gaps in multiple locations. Deficiencies are defined as locations where there are no sidewalk on either side of the street. Deficiencies exist on Long Street, Airport Road, 47th Avenue,

49th Avenue, 53rd Avenue, and Wiley Creek Drive. Full sidewalks on both sides of the street are generally provided downtown and near the schools, as well as along Santiam Highway.

A map of existing pedestrian facilities can be found in **Figure 4**.

BICYCLE NETWORK

Bicycling plays a key role in the transportation system's ability to support healthy lifestyles and provide a variety of travel choices beyond the motor vehicle. Biking trips are an option for getting to and from school, shopping, commuting to work, and for travel to other activity generators in the City, as well as for recreational purposes. Currently, there are several designated bike routes and lanes within Sweet Home's downtown area, including portions of Main Street and Long Street.

Currently, there are no separated cycling facilities in Sweet Home, however, painted bike lanes are present along a large portion of US 20 and one segment of Long Street between 22nd Avenue and 35th Avenue. Sweet Home's existing bicycle facilities are shown in **Figure 5**.

BICYCLE LEVEL OF TRAFFIC STRESS

The Bicycle Level of Traffic Stress (LTS) is a measure used to assess the comfort and safety of bicycling conditions on different streets and routes. It quantifies the level of stress or discomfort experienced by cyclists when riding in proximity to motor vehicle traffic. The LTS methodology was developed to evaluate the suitability of streets and determine the need for bicycle infrastructure improvements.

LTS categorizes streets into four levels based on their traffic characteristics:

- LTS 1: Very Low Stress - These streets typically have minimal or no traffic, low vehicle speeds, and dedicated bicycle facilities such as bike lanes or separated paths. They are considered highly comfortable for cyclists.
- LTS 2: Low Stress - These streets have low traffic volumes and speeds, and they may have shared roadways or designated bicycle lanes. They are generally comfortable for most cyclists.
- LTS 3: Moderate Stress - These streets have moderate traffic volumes and speeds, often lacking dedicated bicycle facilities. Cyclists may have to share the road with vehicles, and there may be some challenges at intersections or other conflict points.
- LTS 4: High Stress - These streets have high traffic volumes, high vehicle speeds, and a lack of dedicated bicycle facilities. Cyclists face significant challenges sharing the road with fast-moving and heavy traffic, making these streets uncomfortable and potentially unsafe for biking.

By evaluating streets using the LTS framework, transportation planners and policymakers can identify areas where improvements are needed to create a more bicycle-friendly environment. This may include implementing bike lanes, protected bike facilities, traffic calming measures, or other infrastructure enhancements to reduce stress and enhance safety for cyclists.

Collector and Arterial streets in Sweet Home have been evaluated based on the BLTS methodology outlined in the *ODOT Analysis Procedures Manual Version 2 (2020)*. Based on this methodology, the majority of Sweet Home's arterial and connector street network is BLTS level 3 or BLTS level 4, with the score primarily driven by the high travel speeds on these corridors. BLTS on Sweet Home's transportation network is summarized in **Figure 6**.

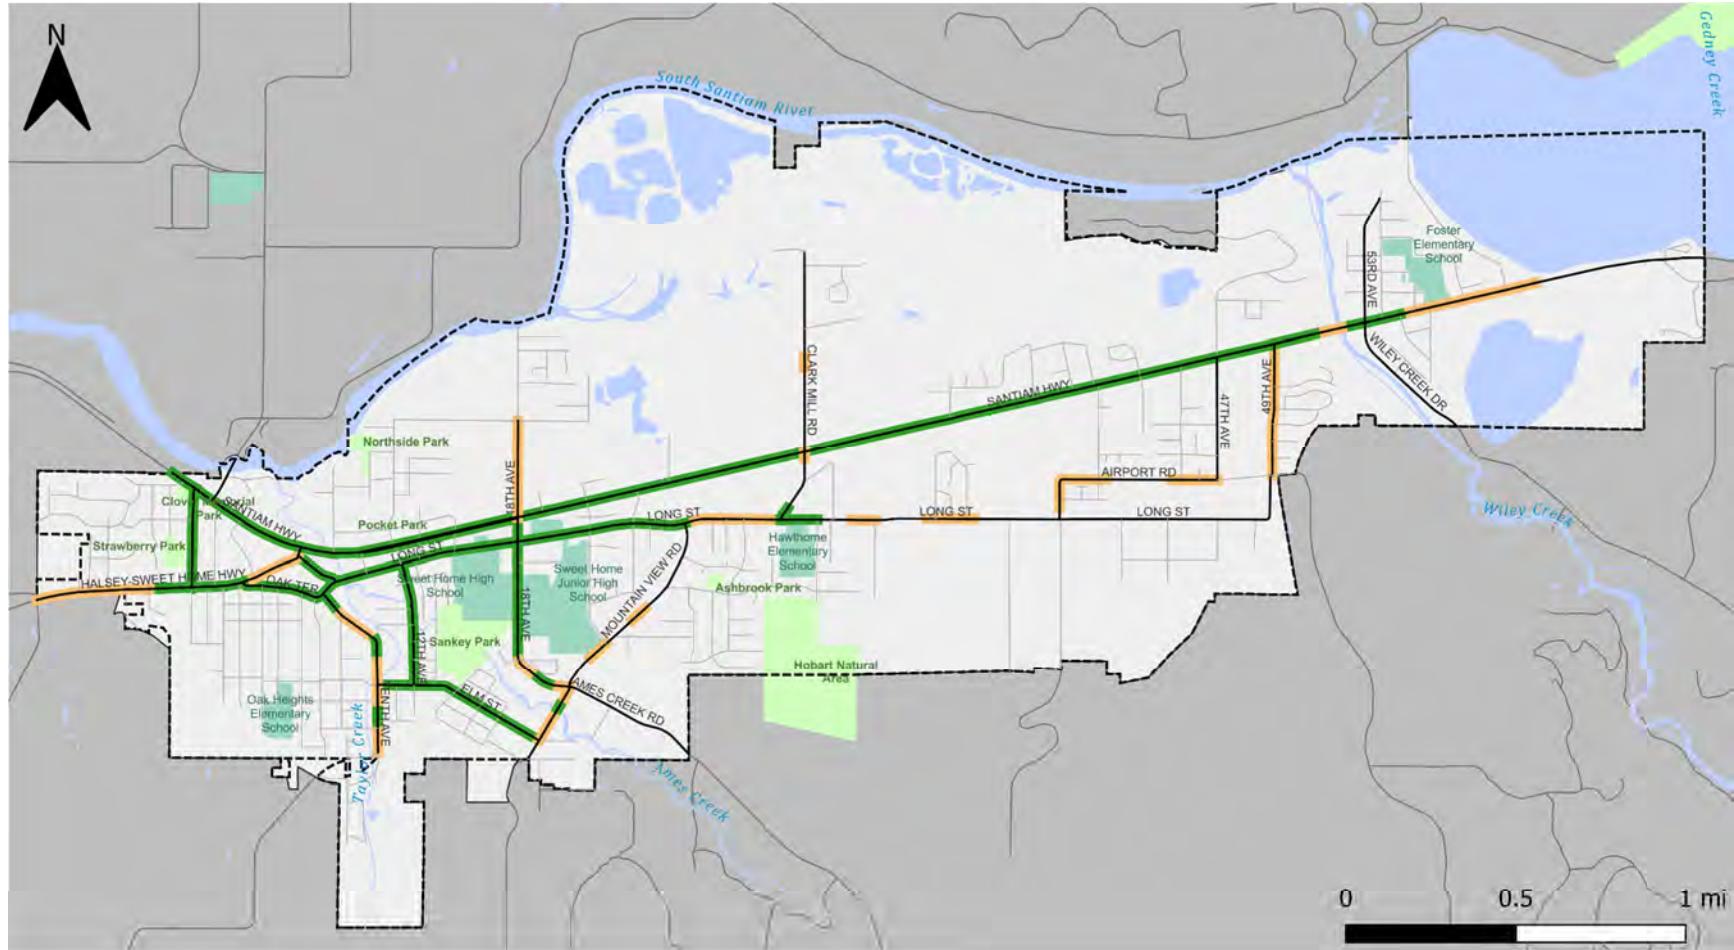

FIGURE 4: SIDEWALK INVENTORY

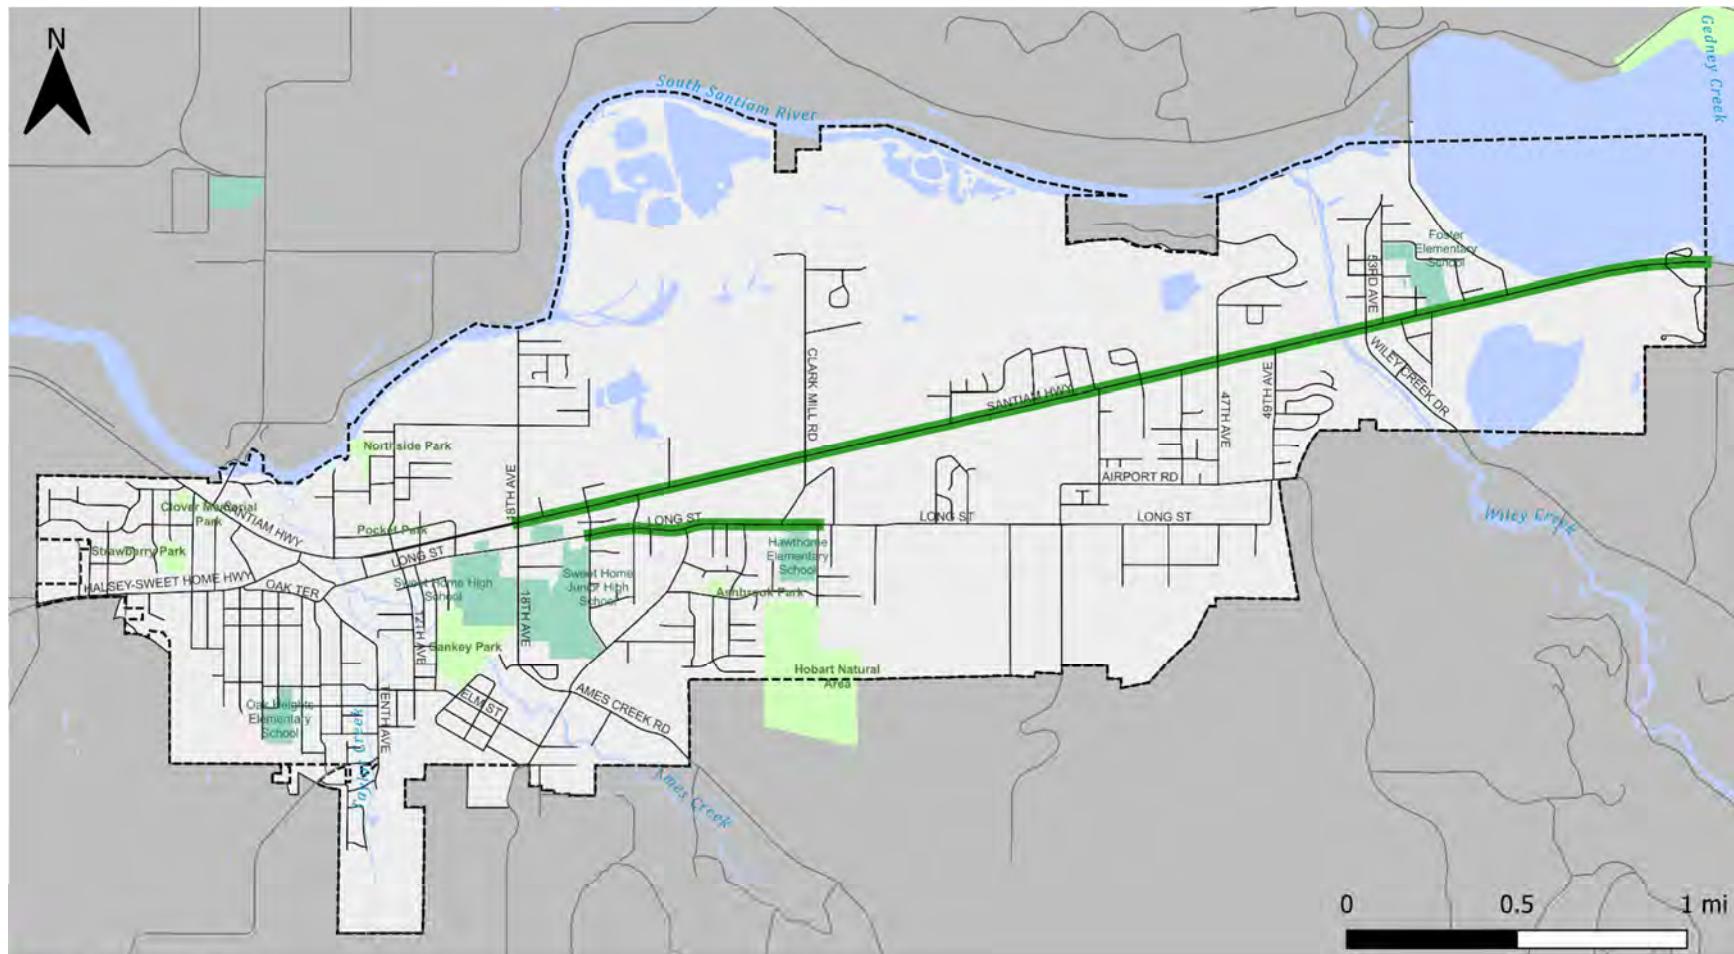

FIGURE 5: EXISTING BICYCLE FACILITIES

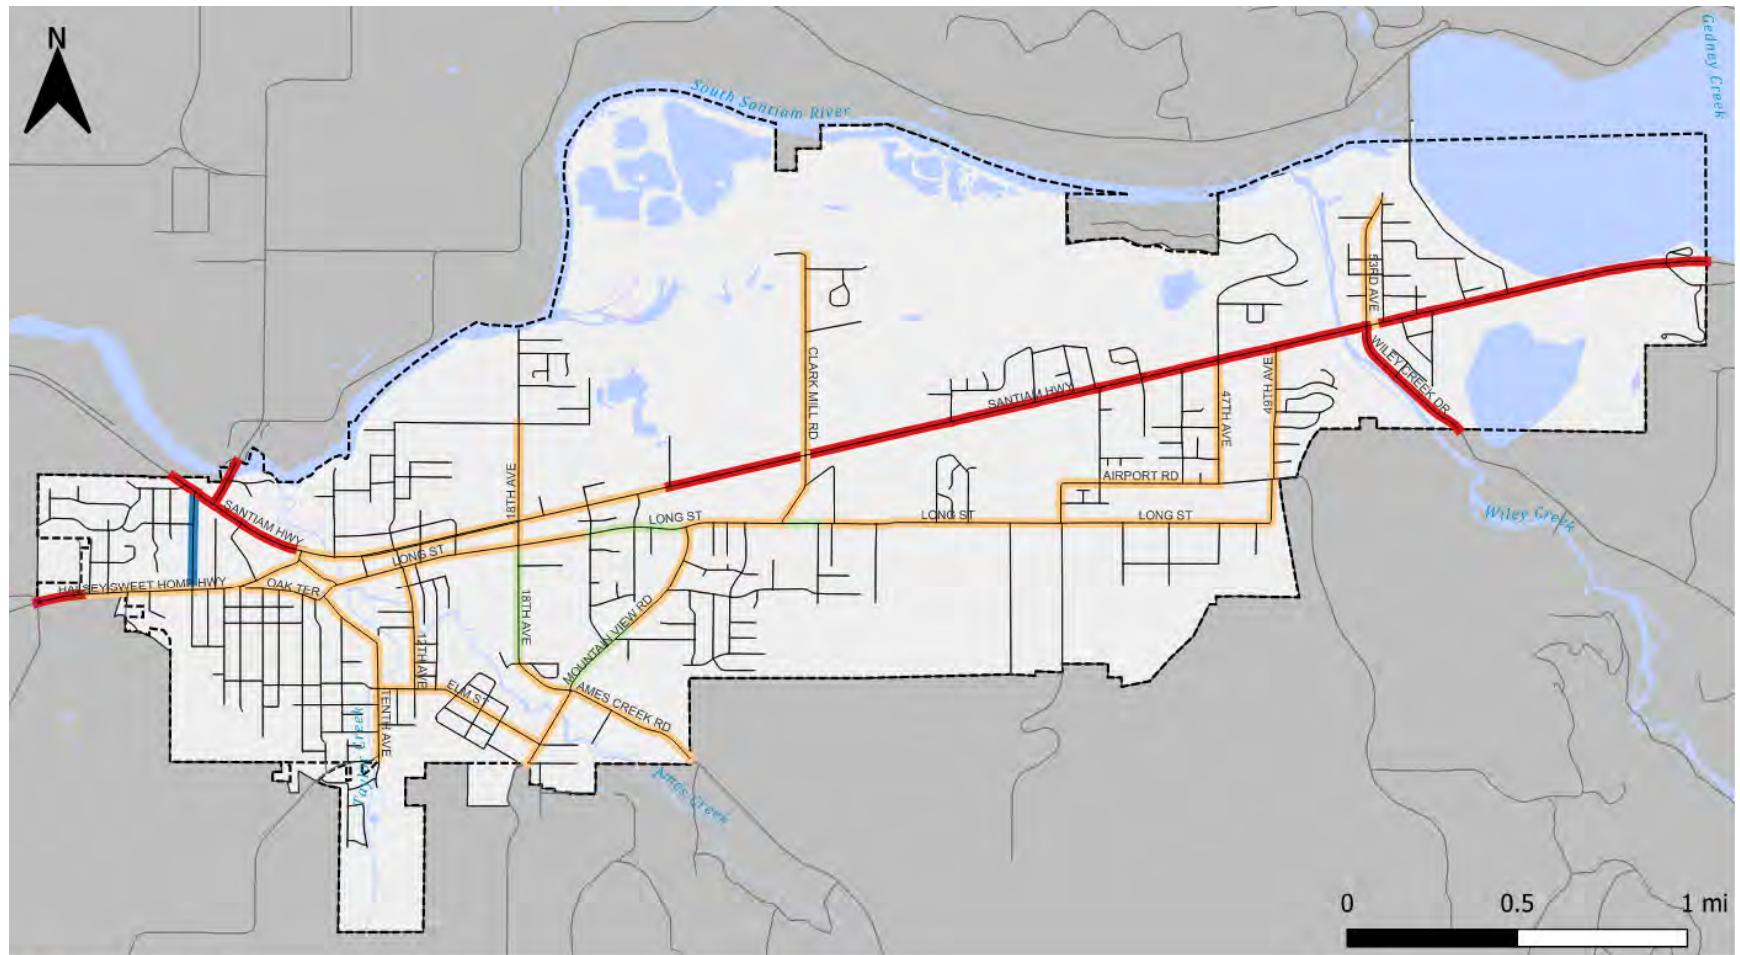

FIGURE 6: BLTS ON CITY COLLECTOR AND ARTERIAL STREETS

TRANSIT CONDITIONS

Transit service is provided in Sweet Home through three main routes. The Linn Shuttle, the Sweet Home Shopper, and Dial-A-Bus Service. A description of these three services is summarized in the following sections.

LINN SHUTTLE

The non-profit Senior Citizens of Sweet Home operates the Linn Shuttle fixed route service between Sweet Home-Lebanon-Albany. The Linn Shuttle connects with the Linn-Benton Loop at the Linn-Benton Community College Albany Campus (LBCC-Albany) to provide service to East Linn County residents who wish to travel to Albany or Corvallis. Seven round trips a day run between Sweet Home-Lebanon-Albany with an additional 5 round trips between Lebanon and LBCC-Albany called the "LBCC-Lebanon Express". Service is available Monday-Friday between 6:30 a.m. and 7:30 p.m.

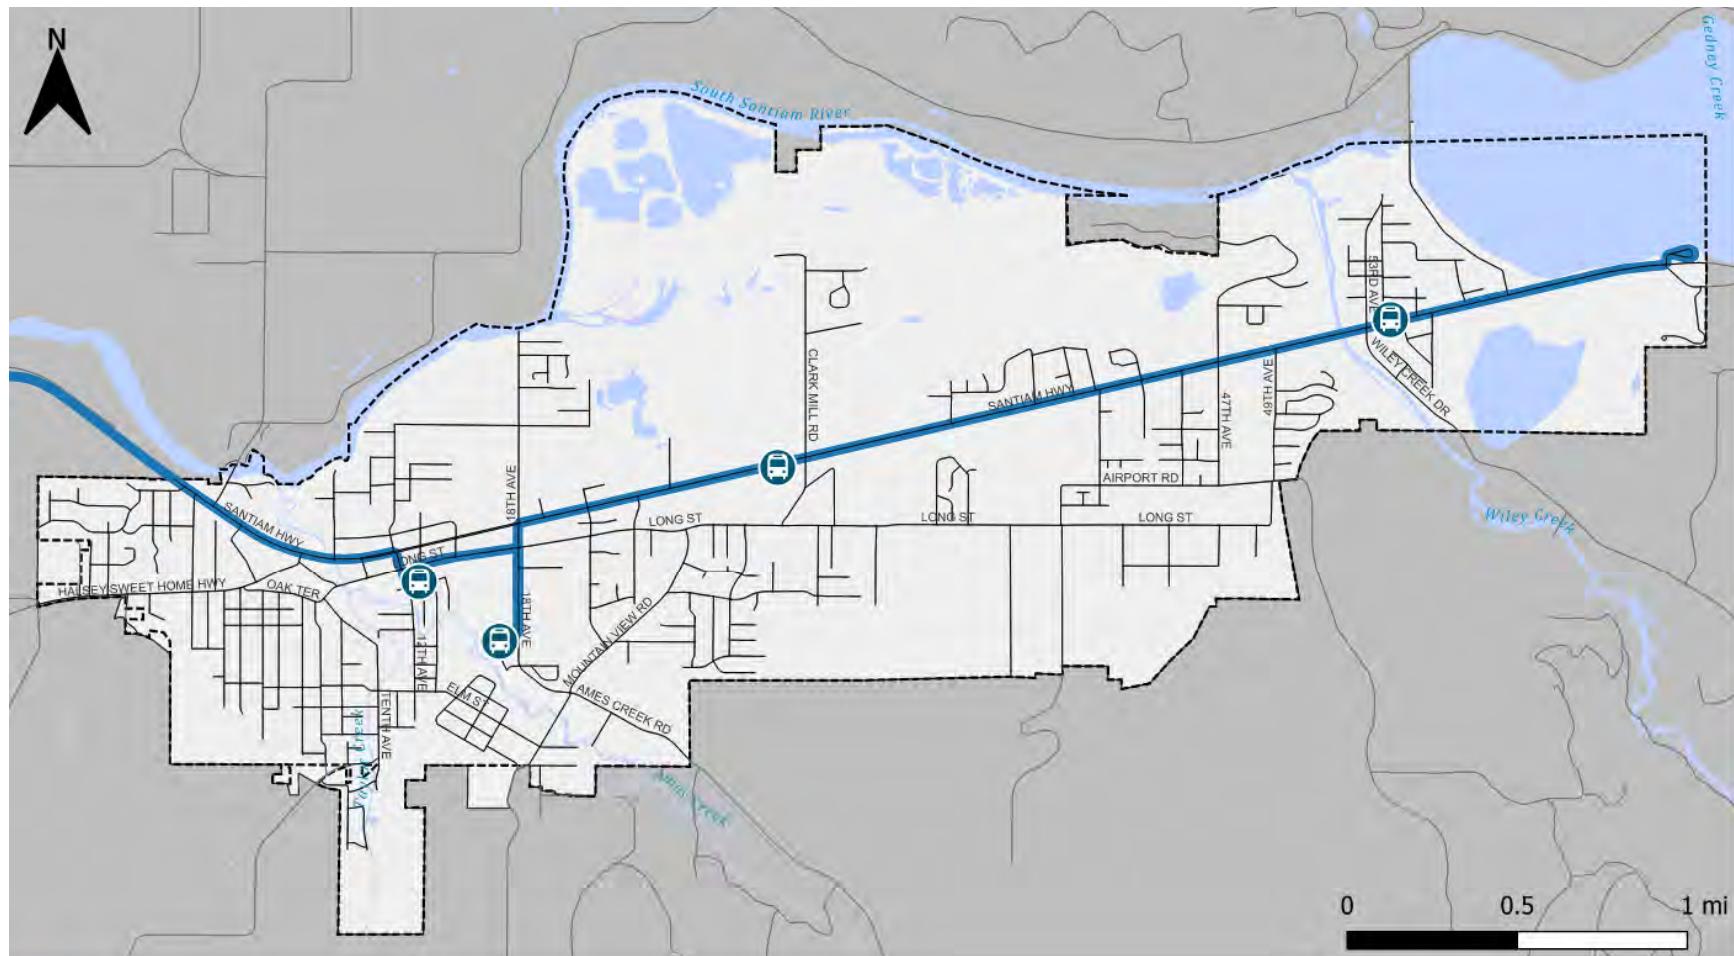

Funding for the Linn Shuttle comes from State Cigarette Tax funds allocated for elderly and handicapped transportation systems, as well as the small cities and rural transportation funds from the Department of Transportation. Anyone can ride the Linn Shuttle. Linn-Benton Community College students and staff can ride for free by showing their ID cards. The shuttle operates on a scheduled route, and the route is illustrated in **Figure 7**.

SWEET HOME SHOPPER

The Shopper is available to everyone, is wheelchair accessible, and buses are equipped with bike racks. The Shopper operates Monday through Friday from 9:00 a.m. to 4:00 p.m. There are four trips from town out to Foster and back. On Tuesdays and Thursdays, the Shopper goes to Cascadia (stopping at Cascadia Short Bridge Rest Stop) with a trip in the morning and a return in the afternoon. The Sweet Home Shopper Route is illustrated in **Figure 8**.

DIAL-A-BUS

The non-profit Senior Citizens of Sweet Home operates the Sweet Home Dial-A-Bus, which provides curb-to-curb service to older adults, people with disabilities, and the public within the boundaries of the Sweet Home School District. It also operates a limited "deviated fixed route" program within the boundaries of the City of Sweet Home. Dial-A-Bus Service is available Monday-Friday between 7:00 a.m. and 4:00 p.m. Rides must be scheduled in advance.

SAFETY CONDITIONS

SAFETY ANALYSIS

Transportation infrastructure must be safe for everyone, whether walking, biking, rolling, or driving. Assessing historical collision data helps identify any shortcomings in the system and improve safety conditions for Sweet Home residents. Crash data from 2017 through 2021 (the most recent five years available) was obtained from the Oregon Department of Transportation (ODOT) and reviewed to identify any high-crash locations and trends involving people walking or biking, who are typically the most vulnerable to serious injuries. All crashes within Sweet Home are mapped in **Figure 9**. Bicycle and pedestrian only crashes are mapped in **Figure 10**.

During these five years, there were a total of 298 crashes, 12 of which involved a pedestrian, and 9 involved a cyclist. 19 crashes were flagged for drug or alcohol involvement. As seen in **Figure 13**, there were three fatalities and 69 crashes that resulted in minor or serious injuries during this period. These comprise almost a quarter of all crashes in Sweet Home.

Many crashes occurred along US 20 (Main Street), including 93 at study intersections for the Transportation System Plan. There were three Injury A crashes that occurred at the intersections with 12th Avenue, 15th Avenue, and 22nd Avenue.

The three fatal crashes occurred at the following intersections:

- 12th Avenue/Hawthorne Street (involved a pedestrian),
- the intersection of Ames Creek Road/Mountain View Road, and
- the intersection of US 20 (Main Street) and 1st Ave.

The most common types of collisions, ranked by frequency, were turning-vehicle crashes, rear-end collisions, fixed-object crashes, and angle collisions (commonly known as "T-bone" crashes). Turning movements accounted for 32 percent of all crashes, with more than half of these incidents resulting in injuries. The primary cause of turning-vehicle crashes was failure to yield at stop signs. A total of 71 rear-end collisions were reported, 34 of which involved only property damage. Additionally, there were 50 fixed-object crashes and 33 angle collisions. Many of these crashes occurred at stop-controlled intersections.

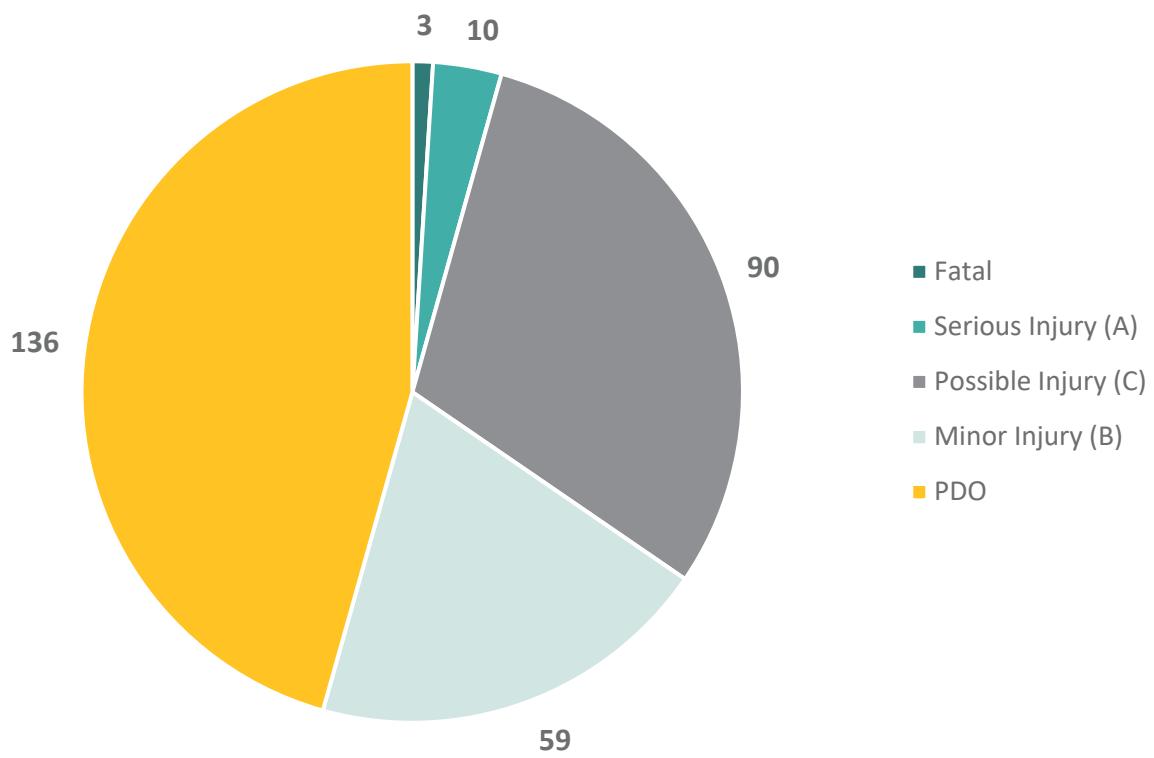

FIGURE 9: SEVERITY OF CRASHES IN SWEET HOME (2017-2021)

Of the twelve pedestrian involved crashes, most were caused by a failure to yield, one of these resulted in a pedestrian fatality. The fatality occurred at the intersection of Hawthorne Street and 12th Avenue in dry conditions during the day. Of the nine bicycle involved crashes there were no serious injuries.

The crash analysis was supplemented by a review of ODOT's Safety Priority Index System listings for locations in the City that ranked among the state's top ten percent of hazardous locations. The Safety Priority Index System (SPIS) is a method developed by ODOT for identifying hazardous locations on state highways, with the score based on three years of crash data, considering crash frequency, rate, and severity. ODOT bases its SPIS on 0.10-mile segments to account for variances in how crash locations are reported. This rating provides a general comparison of the overall safety of the highway based on crash information for all highway segments throughout the state.

According to ODOT 2020 SPIS ratings (data reported between 2017 and 2019), the only location within Sweet Home in the top ten percent of segments is along US 20 (Main Street) just east of 9th Avenue.

In addition to segments, the ODOT SPIS system also provides a list of intersections using similar methods. US 20 (Main Street) and 22nd Ave is an intersection identified on this list.

TOTAL	23	1	11	3	13	7	35

CRASH RATE OF INTERSECTION

A crash rate analysis determines the relative safety of a location compared to similar facilities. The crash rate at an intersection can be compared to the State's 90th percentile crash rate to understand if the intersection is prone to crashes. 90th percentile crash rates are established in APM Exhibit 4-1. Two study intersections exceed the 90th percentile crash rate. The two intersections are Main Street (US 20)/22nd Avenue and Long Street/ 18th Avenue.

TABLE 2. CRASH RATE

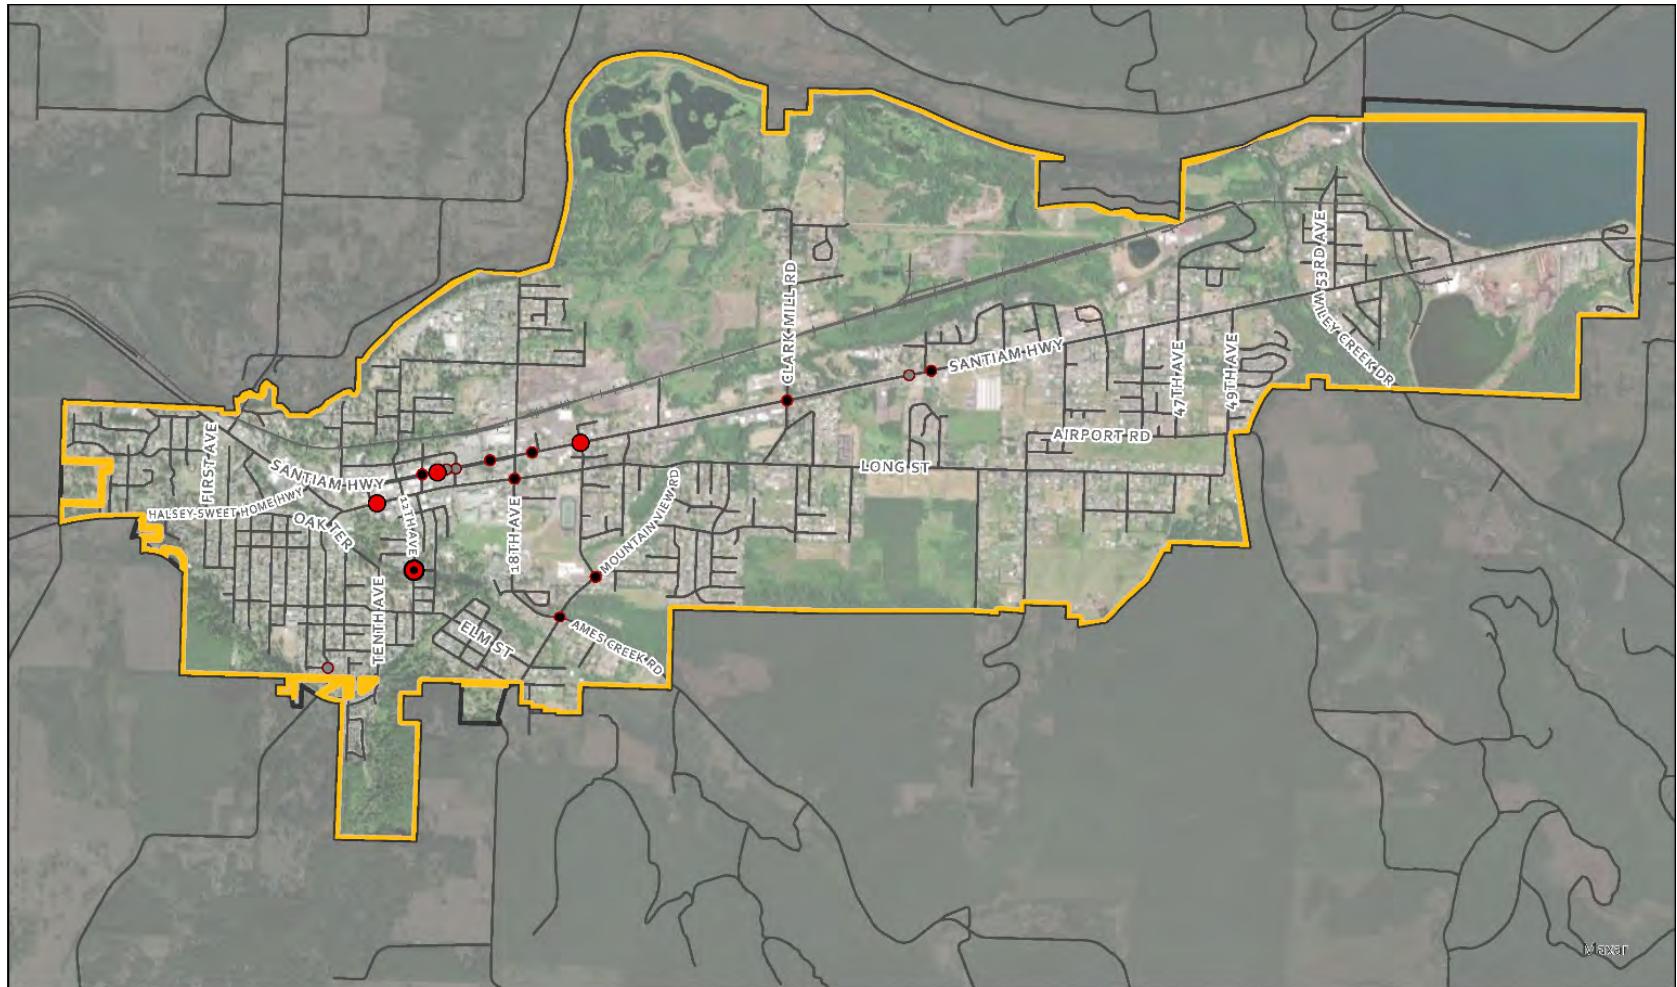

STUDY INTERSECTION	INTERSECTION CONTROL	90 TH PERCENTILE CRASH RATE	CRITICAL RATE	CRASH RATE
1. MAIN STREET (US 20) AND PLEASANT VALLEY ROAD	Two-Way Stop	0.293	0.222	0.146

FIGURE 11: 2017 TO 2021 BICYCLE AND PEDESTRIAN CRASHES BY SEVERITY

MOTOR VEHICLE CONDITIONS

KEY CORRIDORS

US 20 and OR 228 are the key arterials in Sweet Home. US 20 is a major east-west highway that runs through Sweet Home. It begins at the Oregon Coast in Newport and travels eastward through the Willamette National Forest before eventually reaching the Idaho border. In Sweet Home, US 20 runs through the center of town along Main Street. It is an important transportation route for local residents, as well as for travelers passing through the area. OR 228 is a shorter highway that runs north-south through Sweet Home. It begins at US 20 near the western edge of town and travels southward through the Willamette National Forest before eventually reaching the city of Halsey. In Sweet Home, OR 228 provides access to several recreational areas and natural attractions, including Quartzville Creek and Green Peter Lake.

In addition to the two highways, Long Street serves as the primary east-west arterial in Sweet Home. Long Street begins at OR 228 to the west, and eventually terminates at Airport Road and connects to US 20 via 47th Avenue.

The arterial and collector road network in Sweet Home is illustrated in Error! Reference source not found. The posted speeds on this study road network are illustrated in **Figure 13**.

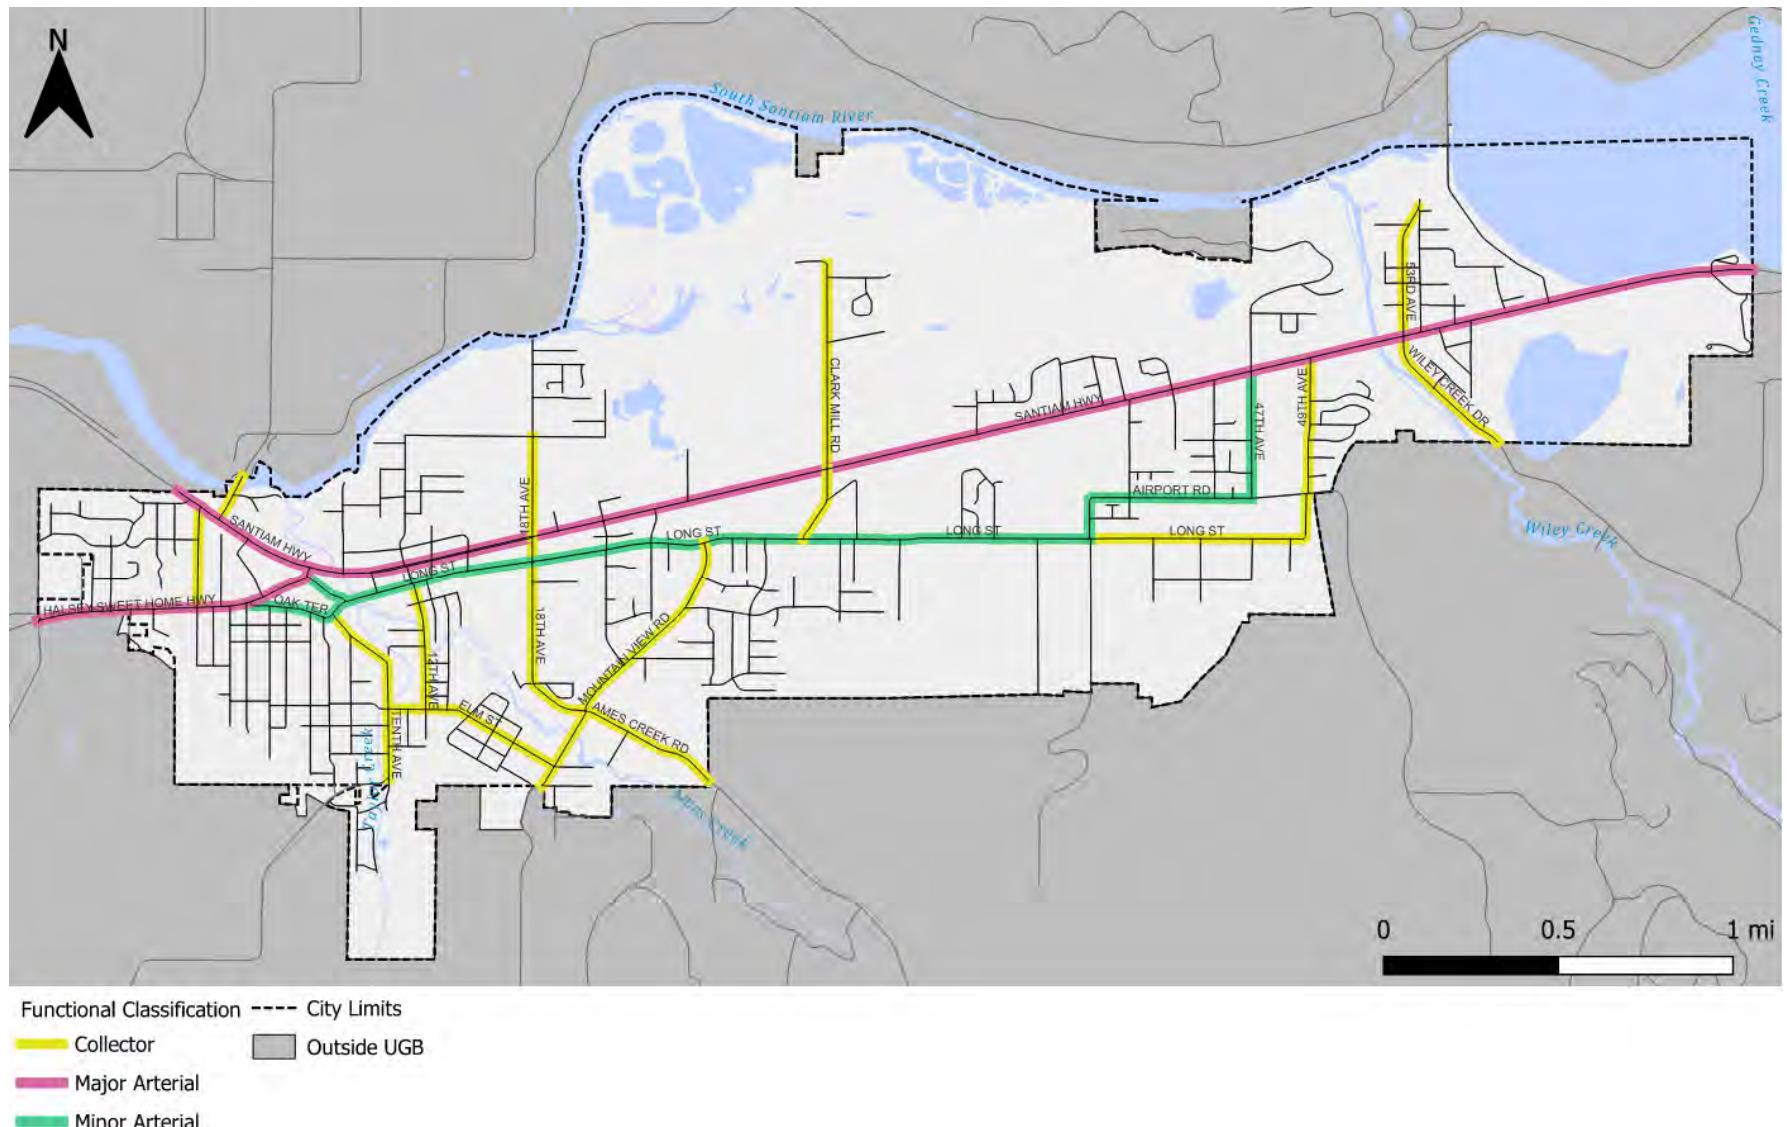

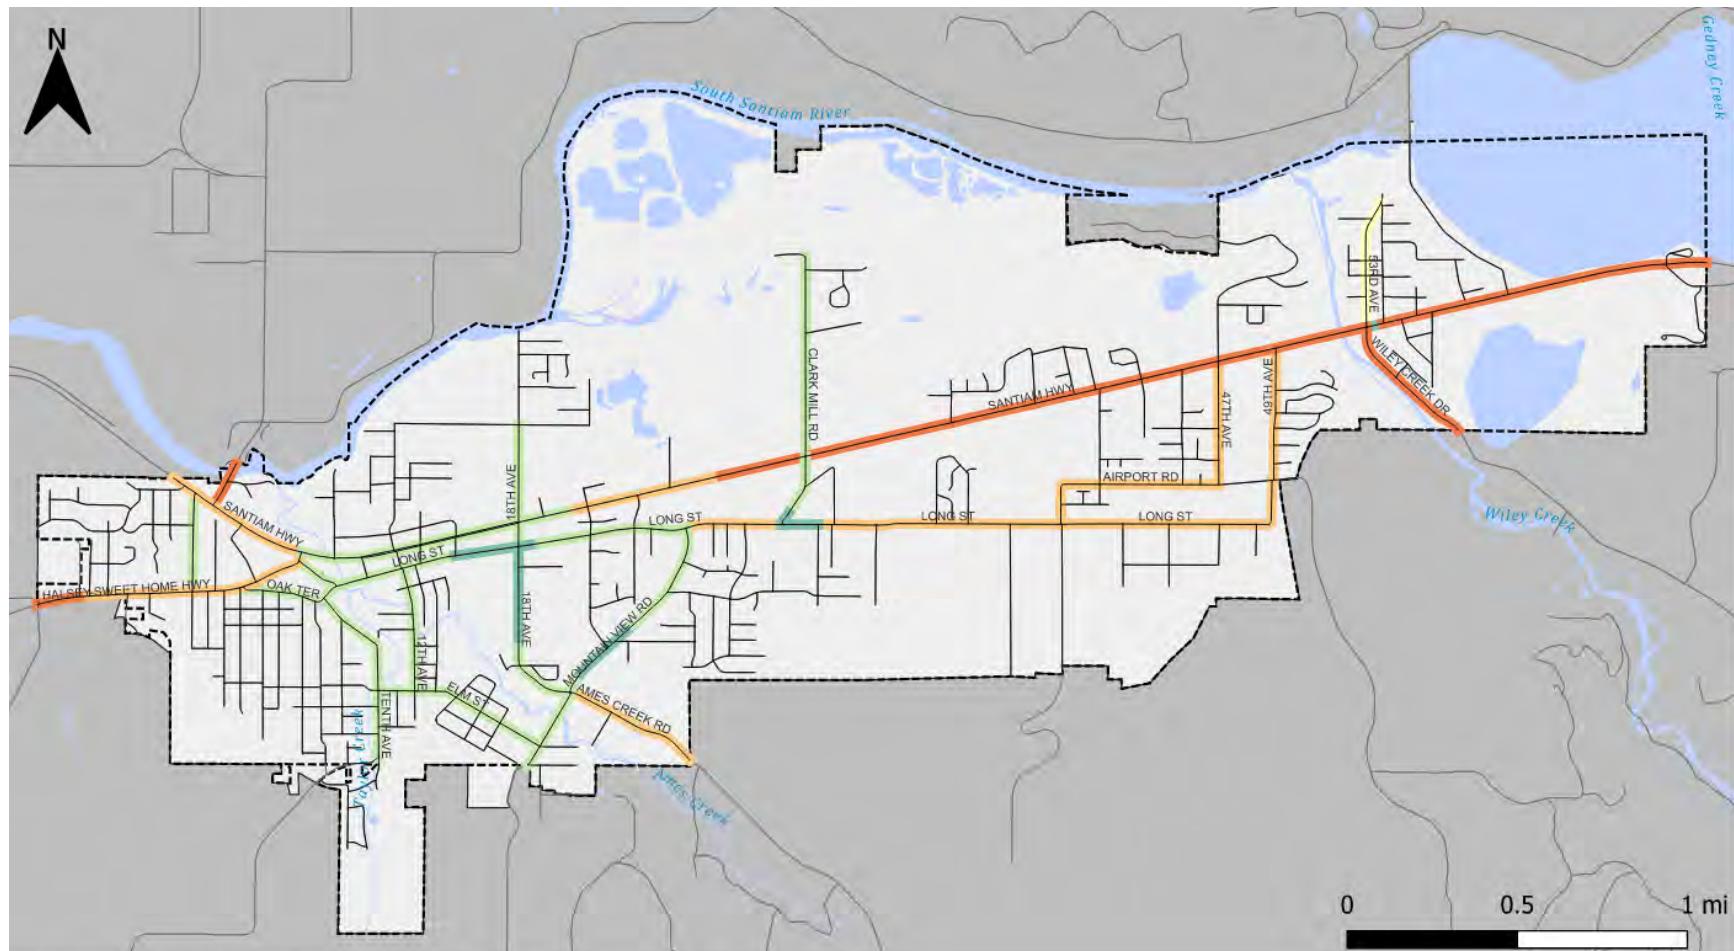

FIGURE 12: ARTERIAL AND COLLECTOR ROAD NETWORK

FIGURE 13: POSTED SPEEDS ON ARTERIAL AND COLLECTOR ROAD NETWORK

ACCESS MANAGEMENT

According to standards outlined in OAR 734-051-4020, minimum access spacing should be maintained on District and Regional highways. These minimums are outlined in **Table 3** below. Two highways within the Sweet Home UGB must adhere to these standards. These highways are US 20 and OR 228. Highway segments were divided based on the posted speed limit. The total number of access points was calculated for each segment and divided by length to determine the average spacing for the segment. Average spacing by segment is displayed in **Table 4**.

TABLE 3. ACCESS SPACING STANDARDS

SPEED (MPH)	URBAN	
	DISTRICT HIGHWAY (FT)	REGIONAL HIGHWAY (FT)
55 OR HIGHER	700	990
50	550	830
40 & 45	500	500
30 & 35	350	350
25 & LOWER	250	250

OR 228 is classified as a District Highway while US 20 is classified as a Regional Highway within the Oregon Highway Plan. None of the highway segments within the Sweet Home UGB meet Access spacing standards. Both US 20 and OR 228 have an average access spacing of 100 feet within the UGB.

TABLE 4. AVERAGE ACCESS SPACING BY SEGMENT

WEST EXTENT	EAST EXTENT	MAIN ROAD	POSTED SPEED	LENGTH (FT)	STANDARD	AVERAGE SPACING
WEST UGB	OR 228	US 20	35	2,160	350	90
OR 228	22 ND Ave	US 20	25	4,540	250	70
22 ND AVE	1,350 FT EAST OF 23 RD AVE	US 20	35	2,135	350	55
1,350 FT EAST OF 23 RD AVE	EAST UGB	US 20	45	15,650	500	130
WEST UGB	FERN LANE	OR 228	45	800	500	160
FERN LANE	US 20	OR 228	35	3,560	350	90

EXISTING TRAFFIC CONDITIONS AT STUDY INTERSECTIONS

Congestion levels at a selection of key intersections (**Figure 14**) in Sweet Home were evaluated to understand where motorists experience higher delays. The study intersections include five signalized intersections, 12 two-way stop-controlled (TWSC) intersections, and two all-way stop-controlled (AWSC) intersections.

Traffic counts were collected in June 2021, and existing conditions analysis has assumed a base year of 2021. Study intersection traffic operations have been analyzed using estimated 30th highest hour traffic volume (30 HV) conditions. A singular system peak hour has been used to derive intersection traffic volumes for traffic analysis. The peak hour for the study intersections was identified using the Oregon Traffic Monitoring System MS2 platform, which determined the system's p.m. peak hour to be 4:15 to 5:15 p.m. A seasonal adjustment factor of 1.04 has been applied to the volumes based on the methodology described in **Task 3.1 Existing Conditions Inventory and Analysis**. Traffic volumes for the weekday p.m. peak hour are shown in **Figure 15** and **Figure 16**.

The County and City have adopted vehicle mobility standards. These standards provide a benchmark to measure intersection congestion against and ensure that the transportation system will have adequate capacity to support planned growth. These standards are either measured by level of service (LOS) or volume-to-capacity ratio (v/c ratio). The LOS is an A to F rating of the level of delay the average vehicle will experience at an intersection (similar to a report card, where LOS A has very little delay and LOS F is the result of a lot of delay). The v/c ratio is a proportion from zero to one that measures the approximate amount of an intersection's capacity to move traffic that is being used. For example, a v/c ratio of 0.90 indicates that 90 percent of an intersection's capacity to move traffic is being used.

Existing Peak Hour traffic conditions have been compared to ODOT and City mobility targets/operating standards in **Table 5**. Results of the traffic operations analysis indicate that most study intersections are operating within analysis thresholds. Main Street (US 20) and Pleasant Valley Road is the only intersection that currently exceeds its mobility standard.

Notes: Overall intersection measures reported for signal and AWSC intersections. The worst approach for major/minor approaches is reported for TWSC intersections.

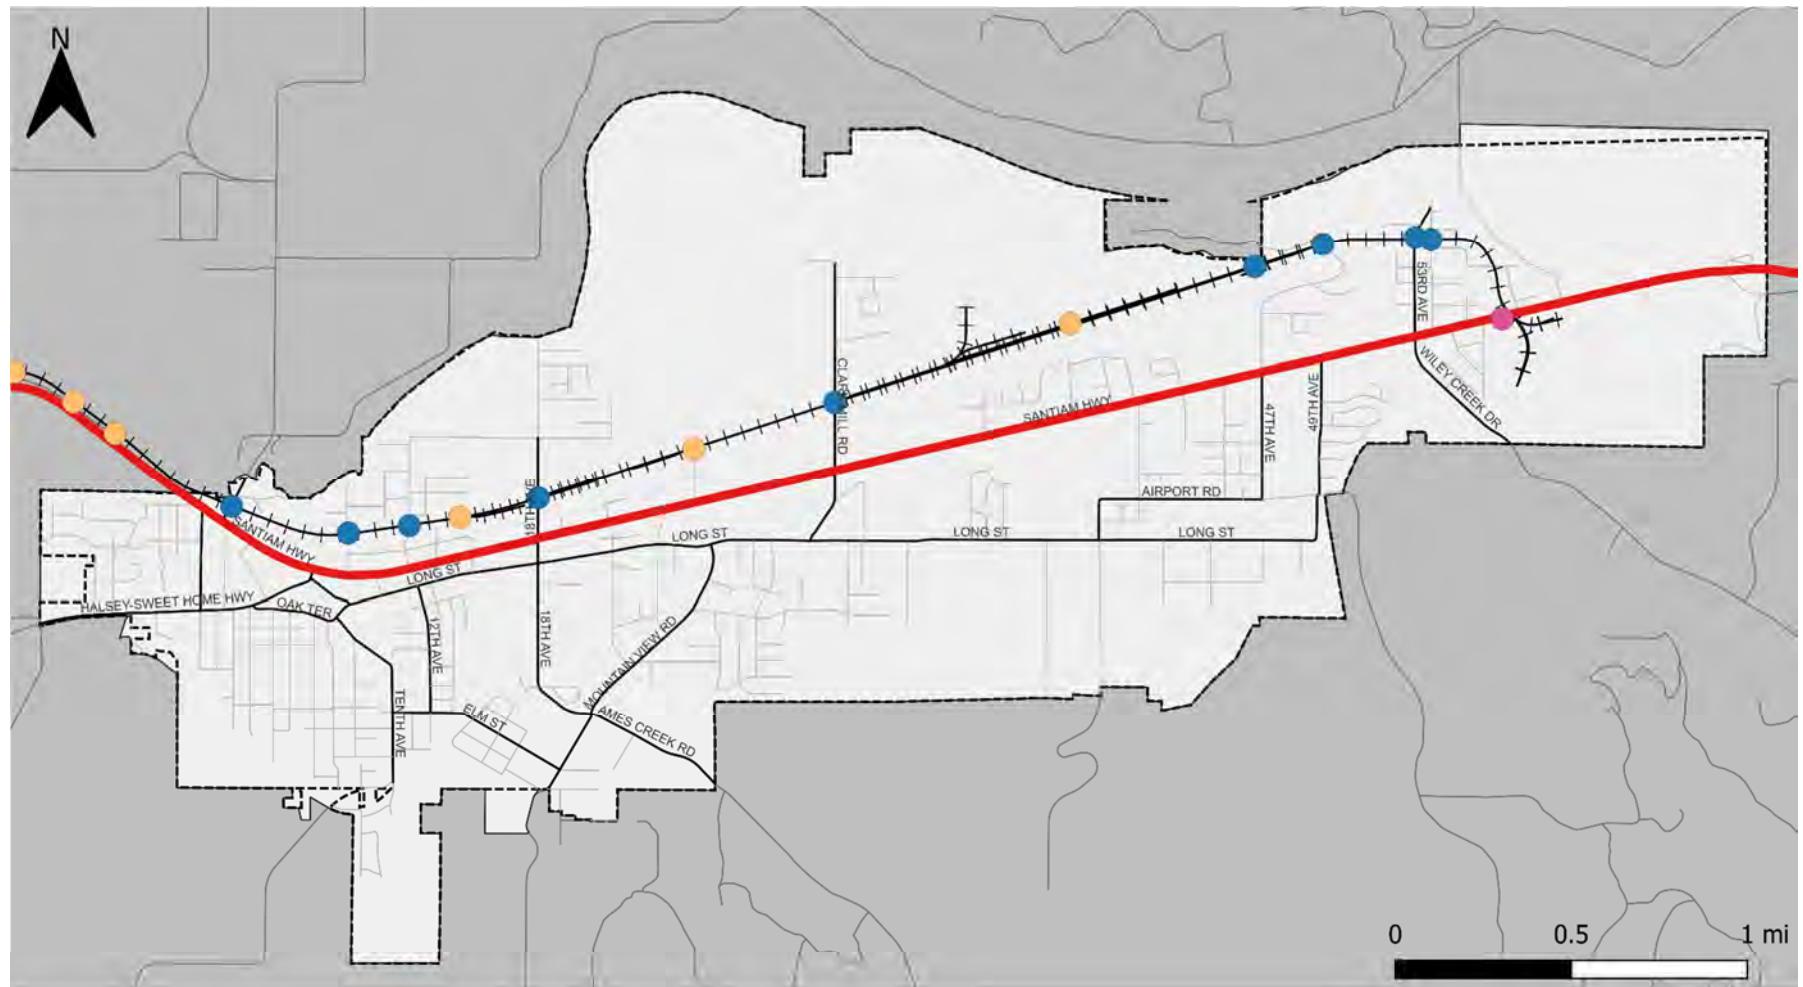

A V/C denoted in red exceeds the mobility standard for the intersection.

FREIGHT NETWORK

The existing freight network, railways, and rail crossing locations are shown in **Figure 17**. US 20 is part of the National System and handles moderate truck volumes between Sweet Home and I-5 to the west, with an average daily traffic (ADT) range between 500 and 14,999.

One rail line serves Sweet Home from the west, terminating at the Foster Mill site on the east side of the City. Currently, the railroad trestle crossing US 20 is damaged, and no rail traffic can cross, causing the rail line to terminate just prior to the trestle. The line is operated by Albany and Eastern Railroad Company and connects Sweet Home to Albany. Within the City limits the rail line is located roughly one block north of US 20, running roughly parallel thereto.

The railroad crossing at 24th Avenue is currently private, but ODOT has issued a crossing order to improve the crossing. Once the crossing development occurs, it will transfer to public ownership.

Bike & Bus & Car & Light Truck & Motorcycles & Multi-Trailer Truck (5 or less axles) & Multi-Trailer Truck (7 or more axles) & Pedestrian & Single-Trailer Truck (4 or less axles) & Single-Trailer Truck (5 or more axles) & Single Unit Truck (2 axles) & Single Unit Truck (3 axles) & Single Unit Truck (4 or more axles)

The diagram illustrates a peak-hour traffic count analysis for an intersection. It shows four data points connected by lines:

- Pleasant Valley Rd:** Located at the top. Arrows indicate traffic flow from the bottom-left towards the top-right. Key values: SB (1886), 1878, 1311, 0, 567, 1283, 603, 0, 4.
- SANTIAM HWY NOD 016 (HWY 20) EB:** Located on the left. Arrows indicate traffic flow from the left towards the right. Key values: 6806, 603, 6195, 8, 0, 567, 0, 6365, 13.
- SANTIAM HWY NOD 016 (HWY 20) WB:** Located on the right. Arrows indicate traffic flow from the right towards the left. Key values: 1311, 6195, 16, 2, 1283, 6365, 15.
- Driveway:** Located at the bottom. Arrows indicate traffic flow from the bottom-left towards the bottom-right. Key values: 24, 0, 13, 16, 8, 0, 15, 29, 23, 52.
